Description

Amelia V7.4.1 WP Plugin Free Download

Amelia - Enterprise-Level Appointment Booking WordPress Plugin.

Amelia is a next-generation Appointment Booking WordPress plugin built with the newest technology by an award-winning team.

For all our users wondering about the high price, and for all users with expiring support: please reach out to us so we could provide you with detailed answers and information, and suggest currently available solutions and special offers.

Amelia is your automated booking specialist, working 24/7 to make sure your customers can make appointments even while you sleep.

It is a comprehensive booking software, supporting:

Create custom events (classes, conferences, meetings, etc) and allow your customers book their attendance through a nice&polished front-end event calendar. (New!)

Keep your customers and employees notified and reminded of their appointments in realtime with SMS notifications. (New!)

Multiple employees with custom working hours and days off.

Recurring Appointments. Make sure your customers become returning by letting them schedule recurring appointments and choose whether the appointment recurrence will happen daily, weekly, monthly or yearly. Keep your customers satisfied on a regular basis.(New!)

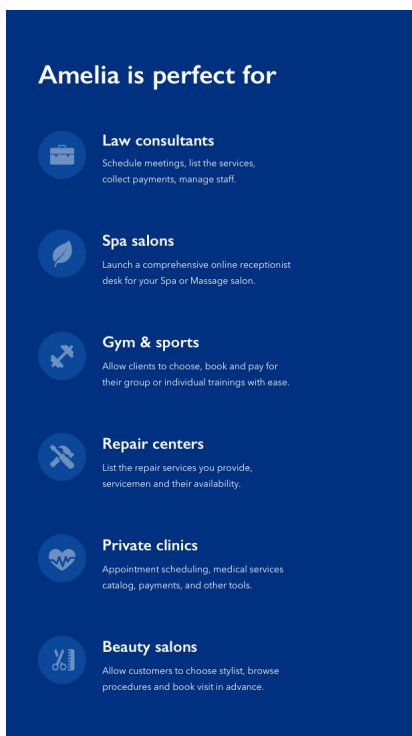

Event Calendar View. Show events in a sleek, modern, fully responsive calendar on the page of your website with a shortcode. By clicking on an event, pop up with the details, schedule and images will be shown, and they will be able to book instantly.(New!)

Employee Panel and Customer Panel. Let your employees and customers manage their bookings without access to WordPress Dashboard, straight from the front-end page of you your website. Employees and customers can log in and take control over their appointments and events, manage their schedule, working hours, days off, and special days. Employees can manage the price for their services, as well as the capacity. Customers can reschedule their appointments.(New!)

Native Zoom integration – In a few clicks, you can connect your Zoom account with Amelia. Now your customers can book online appointments and events, and get a link to access them in the notification. This integration will save you a ton of time and help reduce no-shows. (New!)

Special Days support – configure specific dates or date ranges with a different schedule. (New!)

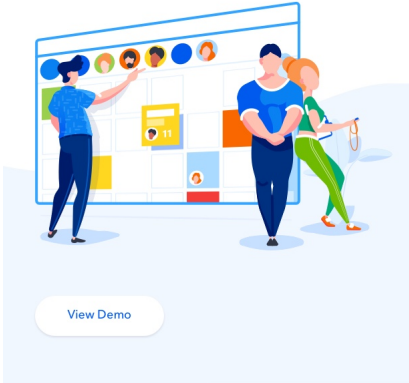

2-Way Google Calendar Integration for each employee.
WooCommerce integration.
Multiple services and service categories, Service Extras.
Multiple business locations.
Graphs and diagrams for business performance KPIs.
And many more (see feature list).

Easily Manageable Calendar

Track the workload of your business in a convenient joint calendar view, with Monthly, Weekly, Daily, List and Timeline layouts. Filter by staff, locations and services.

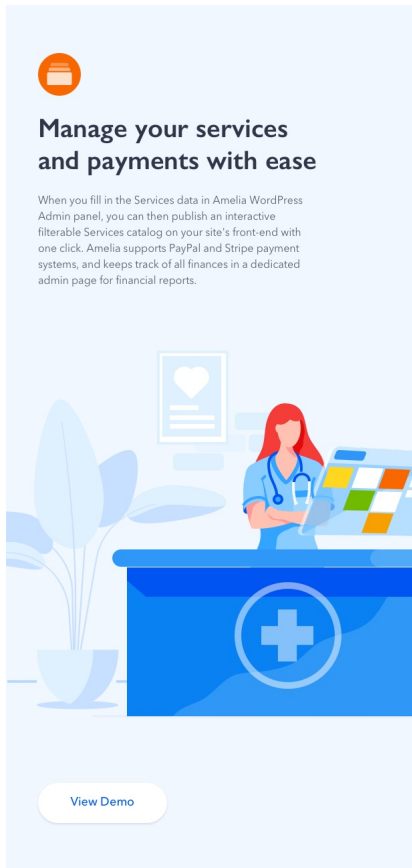

[View Demo](#)

Flexible schedule planning, designed to always provide clarity on employees allocation.

Appointments management with Amelia is as simple as it can be, even you have multiple employees and several business locations: day-to-day tracking is done through Appointments and Calendar admin interfaces, a high-level overview via an insightful Dashboard.

Where can I see the feature list?

Feature list can be found here. It's not 100% complete, but covers all major features. Detailed documentation, tutorials, demos can be found on the plugin's website. A demo (fake Gym website) can be found here. A back-end "sandbox" demo is coming in a few days.

Will Amelia be a match for my business?

Amelia is perfect for any business that relies on scheduling and booking appointments in advance. Between others:

Spa salons.

Beauty and hairdresser salons.

Private photographers and wedding photographers.

Private tour guides.

Private clinics, dentists, other healthcare companies.

Law and business consultants.

Personal life and business coaches.

Tourism industry.

Repair and service centers.

Private psychologists.

Cosmetologists.

Internet Cafes.

And many others...

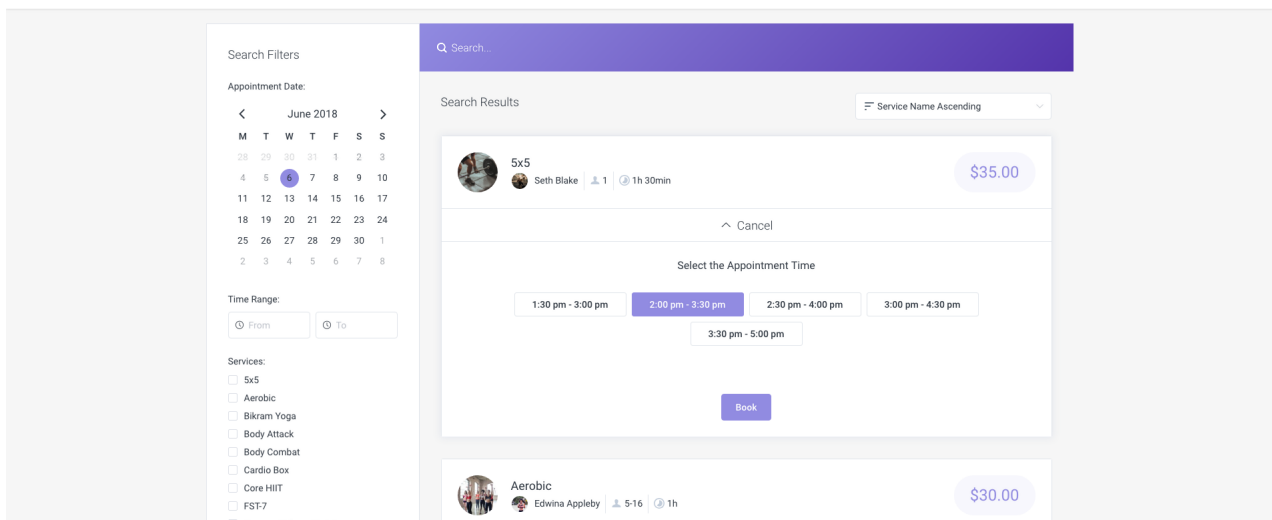

Is it complicated to set up and use?

Not at all! Installing and configuring are trivial. Each backend page includes tooltips and has a link to related documentation pages in the bottom part.

We tried to make the documentation as detailed as possible to make your onboarding experience smooth – see for yourself!

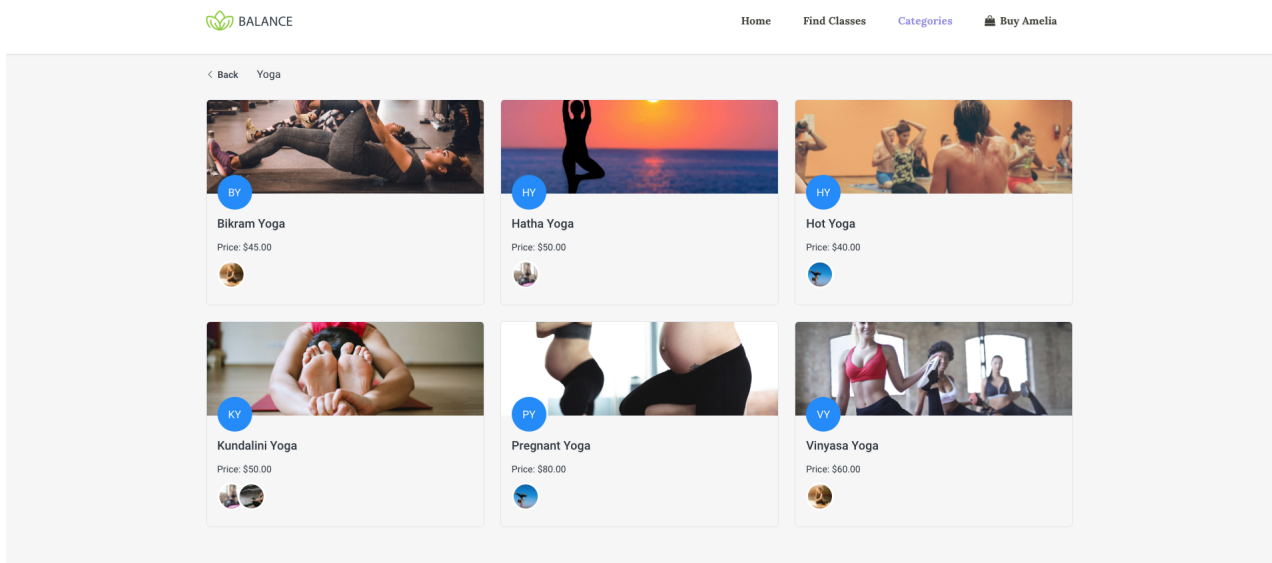

Search-like booking interface

As proved by many major booking websites, it's very convenient for users to pick an appropriate slot by entering one or more search criteria in a filter interface – if we take a hairdresser salon as an example, one may choose a date and a particular hairdresser and browse through available time slots. Amelia provides a shortcode which allows displaying the search interface in 2 clicks:

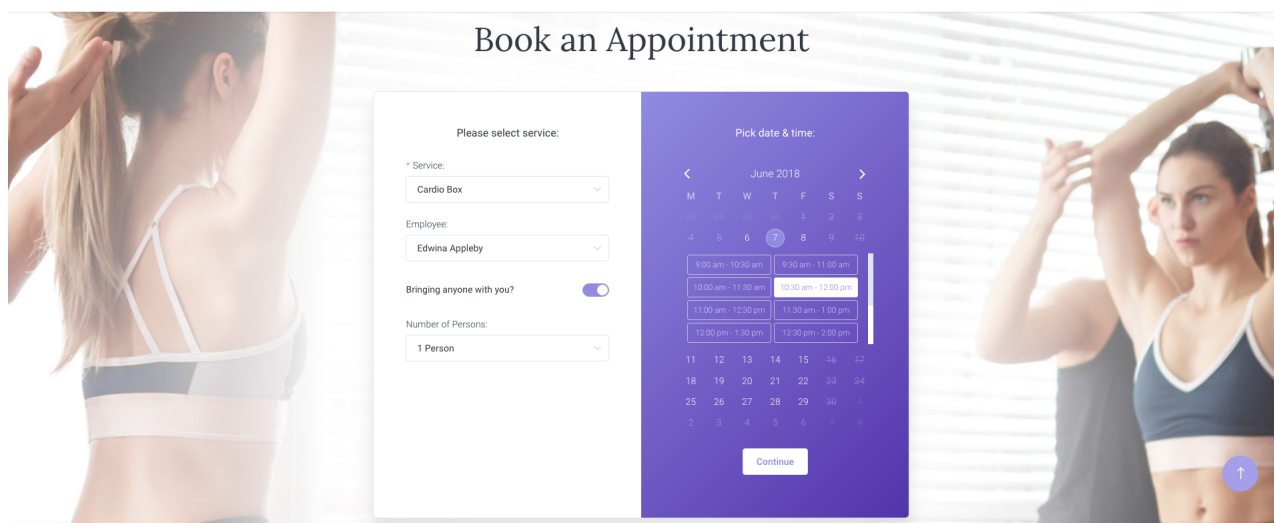

Catalog view for categories and services

If you have Amelia installed on your WP – you don't have to worry about struggling through adding a separate WordPress page for each service category, each service, use additional plugins for displaying images of a service, or organize services in folders. Amelia provides a built-in interface, where with one shortcode you can show all your service categories on one page, or optionally a single category, or just a single service.

Step-By-Step Booking Wizard

In some cases users prefer booking in a step-by-step manner, where they first choose a service and an employee, then a date, then a time slot, etc. Amelia renders a step-by-step booking wizard as a neat one-page app, which allows to switch between steps smoothly. Wizard is added to any page with a single shortcode.

On-Site Payments Support

If you don't want to bother setting up external payment systems, and pay transaction fees, you can just use the on-site payments, which means that your customers will pay in cash when they arrive. Payments data is still stored in the database.

PayPal Payments Support

Amelia implements support for the most popular payment system in the world – PayPal. Configuration takes just a couple of clicks, and you can use the Sandbox mode to try it before you launch it in Production mode.

Stripe Payments Support

Stripe payment system becomes more and more popular worldwide. Amelia has built-in support for this system as well – and as everything else, configuration just takes a minute. Stripe allows demo mode before switching to production mode.

Informative back-end dashboard

Amelia was built with the focus on what's important to all participants of the booking process. The most important is the business owner. That's why the main back-end page of the plugin is the Dashboard, which monitors all business-critical KPIs in a single one-page control panel, allowing the business owners and managers to always keep track of all vital parameters.

The dashboard provides a comprehensive overview of business performance. Key metrics include 18 Approved Appointments, 1 Pending Appointment, 3 Average Bookings, and a total Revenue of \$55,00. The 'Interests / Conversions' section features a bar chart comparing 'Views' and 'Scheduled Appointments' across various employees. A donut chart shows customer demographics: 2 New (25%) and 6 Returning (75%). The 'Today's appointments' table lists upcoming services with details on time, customer, assigned employee, service type, duration, payment, and status.

TIME	CUSTOMER	ASSIGNED TO	SERVICE	DURATION	PAYMENT	STATUS
10:10 AM	Peter Johnson peterjohnson@example.com	Jenifer James	Blood tests	24min	\$55,00	Canceled
11:00 AM	Isidora Markovic isidoramarkovic@gmail.com	Jenifer James	Ear, nose and throat surgical procedures	1h	\$800,00	Approved
12:00 PM	Isidora Markovic isidoramarkovic@gmail.com	Jenifer James	Ear, nose and throat surgical procedures	1h	\$800,00	Approved

Interactive Calendar for Scheduling

Schedule is always best visualized on a calendar view. We worked hard to prepare a very flexible and detailed calendar view, that can give you any level of insight that you need – all services and all employees, or just particular ones; monthly, weekly, daily views, or more specific List and Timeline views.

The calendar view allows for detailed scheduling across a month. It displays a grid for June 2018, with services and employees assigned to specific time slots. The interface includes navigation for different views (Month, Week, Day, List, Timeline) and a filter for services. A list of all employees is provided at the top for easy selection.

Mon	Tue	Wed	Thu	Fri	Sat	Sun
28	29	30	31	1	2	3
4	5	6	7	8	9	10
11	12	13	14	15	16	17

Support for Multiple Employees

It doesn't matter if your business is a one-man-show, or you have 20 employees – Amelia can support both cases. Each employee can provide a particular set of services, and had individual schedule, days off, working hours and breaks.

Support for Multiple Services and Categories

Amelia provides a way to configure a catalog of services and categories (groups) of services – each service can have its own price, duration, allow or disallow group appointments; it is possible to configure buffer time before (time needed to prepare for an appointment) and buffer time after (time needed before same employee will be able to accept new customers, e.g. to rest or clean up).

Support for Appointment Extras (Bonuses)

If you would like to upsell some activities or products to your customers when they book appointments, you can easily do so with Amelia. E.g. if you're providing a guided tour and would like to sell also a meal during the tour, and several polaroid photos, and include museum tickets – just add these as Extras (Bonuses):

Support for Multiple Business Locations

Amelia will support you as you grow your business and expand to multiple business locations. Each location can be added to the database, employees assigned to locations, and then your customers will be able to additionally choose a location while they book.

The screenshot displays the Amelia plugin's 'Locations' management interface. On the left is a sidebar menu with options like Dashboard, Posts, Media, Pages, Comments, Appearance, Plugins, Users, Tools, Settings, Amelia, and various business-related features. The main area shows a map of Orlando, Florida, with a single location pin labeled 'loc' at 'International Drive, Orlando, FL, USA'. A 'New Location' modal window is open on the right, containing the following fields:

- Name:** Central Office
- Address:** Downtown Shell Hall, Elm Street, Potsdam, New York, USA
- Pin Icon:** Purple
- Map:** A map view showing the location in Potsdam, New York, near the 'Potsdam Public Museum' and 'Roxy Theater'.

At the bottom of the modal are 'Cancel' and 'Save' buttons. The background interface shows 'Showing 1 to 1 of 1 locations' and a 'Need Help?' link.
