Candidate Finder SaaS V1.2 - Recruitment Management and Job Portal

Candidate finder SaaS is an advance recruitment portal where employers can signup and pay for unique features like their own web section with branding, conducting online quizzes and interviews from candidates. It's unique job board allows employers to do an analysis and scrutiny among applying candidates before having them onboard. Admin/Owner of the system can make any number of packages with monthly and annual subscription against which employers can have paid memberships. With the extensive CMS features, the content on the front website from menus, pages, news and other necessary things can be easily controlled.

The system is built on laravel with a complete and easy to use admin panel to review and control content and features on the system. With the minimum set of installation requirements, it can be set up on any apache or nginx hosting.

Installation & Setup

Instructions are included in documentation for installation and complete usage of the system with step by step pictorial guides. Follow this video for database setup and script installation.

Note : Please go through the documentation for admin before setup especially the installation guide.

Server Requirements

The set of requirements are very simple and are available/enabled on most of the hosting providers.

- Apache or nginx
- Database support (e.g. mysql or mssql)
- PHP 5.6 or greater
- PDO extension support
- PHP GD library support
- OpenSSL support
- CURL support
- Public folder needs to be writeable
