Description

Cryptitan V1.1.3 Crypto Multi-featured Exchange with ERC20 & BEP20 Crypto Support - Giftcard Marketplace Free Download

Cryptitan is a multi-featured Cryptocurrency exchange software. With support for multiple Cryptocurrencies, you are able to host buying & selling with direct bank transfer, credit cards or any other supported payment gateways.

Cryptitan supports virtually almost all local currencies (FIAT) in the world with Bank Account listing for both local withdrawals and deposit, which is tradeable with the supported Cryptocurrencies in the system. Exchange rates for each local currencies can both be manually set or automatically sourced from a trusted exchange rates provider.

To comply with your local KYC & AML laws, it supports flexible KYC verification of your users, as well as the ability to limit trading volumes based on verification status.

Our goal for this system is to introduce as many features as we consider relevant for crypto traders, so with the initial launch we are introducing a fully functioning Giftcard marketplace, with checkout and payment fulfilment that utilizes the crypto trading payment account. So in other words, giftcard can be traded for crypto!

FEATURE HIGHLIGHTS

Crypto Wallets

Using custodial wallet providers (e.g BitGo), Cryptitan provides wallet functionalities to registered users with unique receiving addresses.

Crypto Buy & Sell

Cryptitan supports buying and selling of Cryptocurrencies with direct bank transfer or payment gateways, with optional setting of exchange fees.

Payment Accounts

User's payment transactions are tracked for each supported currencies, with Bank account listing for local deposits and withdrawals.

Giftcard Marketplace

Cryptitan supports giftcard marketplace listing, with checkout and payment fulfilment using the existing payment account of users.

KYC Verification

It supports flexible KYC verification, with the ability to specify the required documents, and optionally set trading limits based on verification status.

Role-Based Administration

The super admin (first registered user) is able to assign specific administration roles to selected users for management activities delegation.

Real-Time Notifications

Cryptitan automatically sends Email, SMS and platform notifications to users about their activities. This can be optionally toggled on or off.

Market Chart

Historical market chart is included for each supported Cryptocurrencies.

Geo Location

User's activities are automatically tracked by their geo location, this is used to identify the country demography of your users.

Customization & Localization

Cryptitan supports multiple color-schemes, light & dark mode and RTL layout. The system is about 99% translatable to any ISO locale.
