Link your pages to coin prices

Refresh coin data every 15 minutes

Show coin prices in 30 currencies

Easy to use shortcode and Crypto widget

Plain text, List, and Grid layout templates

Calculate coin value of any USD/fiat currency value

Developer friendly features and API

Translation ready

Pro feature on the way (see more ?)

NOTE: Loving CryptoWP? Leave a review to help speed up development!

Through the beautifully designed Crypto Dashboard you can import key data about your favorite cryptocurrencies to your site with ease.

Coin prices update in the background of your site every 15 minutes to always show the latest data from the markets.

CryptoWP comes with a drag-and-drop Widget and the [crypto] shortcode to instantly display your imported coin prices data on your site.

To show coin data in versatile ways, use the built-in Grid, List, and Text templates (more coming soon).

Unlike most cryptocurrency plugins, CryptoWP does not take over your admin panel with ads and bloated features and does not overwork your database by storing vast amounts of unused coin data.

CryptoWP only saves relevant coin data from the coins you choose to import to your site through the Crypto Dashboard. CryptoWP gets all coin data from the CryptoCompare API.

While we actively maintain this plugin for bug fixes and new features, we cannot offer support for any downtime by the CryptoCompare API. CryptoWP will never display a watermark of any kind on your website.
