Demandium v2.4 Nulled - Multi Provider On Demand, Handyman, Home service App with admin panel

Demandium is a complete on-demand booking service platform developed using Laravel and Flutter Framework. You can easily build a service marketplace and one-stop solution platform for your home service business with this awesome script. As it is multi provider supported, that means you can add unlimited providers and grow your business fast. This project blended the technology and daily life service experiences with the relevant expertise to bring a revolution in the service industry.

6amTech's goal is to provide industry-standard software solutions to entrepreneurs so that they can easily start their own businesses. As 6amTech is one of the best seller authors in CodeCanyon, you can feel free about the code structure, system design, and architecture of the system.

Demandium comprises of 3 Mobile Applications with the admin panel, provider panel, flutter web app and landing page-

- Admin panel (included)
- Provider panel (included)
- User app (included)
- Flutter web app (included)
- Landing page (included)
- Provider app (Not Included)
- Serviceman app (Not Included)

7 Amazing Reasons to Buy Demandium:

- A compact multi vendor on demand business solution.
- 2 web panels: admin panel & provider panel.
- 2 websites: Flutter web app & business website.
- 3 mobile apps: customer app, provider app (add-on), and serviceman app (add-on)
- 100% responsive design with cross-platform compatibility.
- Clean, well-structured, and maintainable code.

Multiple payment and SMS gateway integration.

All set? How was the ride? Not convinced yet? Well, you better buckle up because you're about to discover some mind-blowing features that will make you a believer in no time!

Here are some remarkable features of Demandium:

Multi-language Supported

Admin can set up multiple languages for the entire system and give their users a native experience. While the providers, servicemen, and customers can change the language of their respective panels & apps and enjoy this feature.

Zone-wise Service Providing System

From the business zone section, the admin can create multiple business zones within their country and create zone-wise services for local customers' needs.

Light/Dark Mode

The Demandium business website, Flutter web app, customer app, provider app, and serviceman app all come with a light/dark mode feature that allows users to use the system as per their preference.

Scheduled Booking System

Customers can schedule a service during booking confirmation and choose their preferred time. This creates more flexibility among customers and servicemen and creates long-term business credibility for the admin.

Track Booking Orders

Customers can track the booking order from the booking details page of the web app or customer app.

Direct Service Booking

From the Demandium user app and web app, customers can book a service directly to their favorite provider.

Customized Booking Request

Customers can create a customized booking request. For example, a customer wants to book an AC cleaning service. But the customer wants the serviceman to use eco-friendly products. In such cases, they can create a customized booking request.

Provider Bidding Option

During a customized booking, all providers can bid for the service with special pricing offers and add beneficial points to their bid. Customers can choose the best provider with the best price and book the service.

Directly Book a Provider

If the customer wants, they can directly book a provider for their service necessities.

Various Service Discounts

Customers can enjoy various service discounts from the coupon section and campaign pages.

Multiple Payment Methods

The admin can add multiple payment methods for customers so they can pay conveniently. Such as digital payment, cash after-service, and wallet payment.

Wallets & Loyalty Points

Admin can provide virtual wallets to customers where all their transactions and earnings will be shown. This includes loyalty points as well. If a customer completes any transaction goal the admin sets, they'll earn loyalty points that will add to their wallet balance. Later, they can pay through their wallets in future bookings.

Refer & Earn

If the admin enables the referral earning option. Customers can use a unique referral code and share it with their friends and family. If any new person places their first order with their referral code, the customer will earn referral bonus points that automatically add to their wallet balance.

Promotional Banners

Admin can create numerous promotional banners from the admin panel to attract customers and increase sales. Customers can see these banners from the web app or personal mobile apps. These promotional banners are divided into three criteria- category-wise banners, service-wise banners, and redirect links. The redirect link banners allow customers to visit another page the admin has linked to.

Push Notifications

From the promotion management section, the admin can create various push notifications for different users (customer, provider, serviceman, all) and different business zones to provide the necessary information and promotional offers.

Discounts & Coupons

Admin can also create various discounts that will be automatically deducted from the specific service during checkout and create coupons that customers can use during checkout and enjoy a discount.

Dynamic Search

The dynamic search bar of the Demandium web app and customer app provides relevant search suggestions and recommendations according to customers' search behaviors.

Help & Support

Users can reach out for any kind of support, query, or help to the admin in the help & support section. This includes chat, email, and phone numbers.

Booking History & Details

All users can see booking history and details from their perspective in their personal app or panel in Demandium.

Transaction History

All users can see their transaction history and filter data according to dates from the transaction history section.

Save Multiple Addresses

Customers can save multiple addresses to their profile and place a booking order using one of those addresses easily during checkout.

Multiple Log-in Option

Users can log in to the web app or customer app using multiple login options such as email, phone, Google, or Facebook account.

Account Deletion Option

The servicemen and customers can delete their accounts from the respective website or apps if they want.

Legal Pages

Admin can edit all their legal page's contents from the admin panel, such as privacy policy, terms & conditions, refund policy, and cancellation policy.

Provider Panel Dashboard

Every provider panel comes with a smart dashboard where they can view the overall business report in one place.

Subcategory-wise Subscription

Providers can subscribe to various service sub-categories that are pre-defined by the admin. This resembles that the provider is equipped with the following sub-categories and is ready to provide the services to the customers.

Serviceman Management

Providers can add new servicemen from the provider panel. Later they can edit their information, see their wallet report, and remove a serviceman if needed.

Generate Invoice

Every user, such as admin, customer, provider, and serviceman, can generate an invoice and print it (if the thermal printer is connected to their device) to track transactions and order details.

Provider Account Management

Providers can manage their accounts, view their wallet dashboards, and edit their profile and bank information from the account management section.

New Service Request

Provider and customer can always request a new service from the admin, and the admin can give feedback on their requested service. With this feature, the admin can bring service varieties into their system.

Self Registration

Both providers and customers can self-register from the business website, web app, or customer app, and the admin can accept their onboarding request from the admin panel.

Backup Database

Admin can backup all their database to a secure place for any future server crashes.

Business Website

With Demandium, you showcase your entire business and promote it via a single landing page called 'business website'. And it comes free with the core package!

Login Recaptcha

Demandium ensures your server's protection by adding a unique re-captcha during every login into the admin and provider panels.

Manage Employee Roles

Admin can create employee roles, add new employees, manage them, and delete any employee if they want.

Now that you know all about Demandium, you can literally connect your business idea with it (even better). Demandium is a complete multi provider on demand service booking platform that you must have to kickstart your business in the on demand industry. So get Demandium today!
