Description

Descript for Web and Desktop Preview V1.0.108 Free Download

Descript for Web and Desktop Preview v1.0.108 for Windows Platform.

You will find that the Descript for Web and the new Desktop Preview have a lot of similarities and limitations. With Descript for Web, you can edit and create content in your web browser without downloading or installing the desktop app. The new Desktop Preview helps bring many performance and reliability improvements from the web version to the desktop!

This isn't just a small change — we think it's the most powerful cloud-based editor ever built. We're talking:

Faster editing, transcription, importing, and publishing.

Instant AI effects like Eye Contact, Studio Sound, and green screen.

Instant project loading to fit your display and browser window with 4K streaming.

Cloud-based processing and storage that frees up your local drive.

A new recorder that uploads as you record.
