Description

Import Settings into WordPress SEO by Yoast V1.1.8 WP Plugin Free Download

Import Settings into WordPress SEO by Yoast V1.1.8, The Yoast WordPress SEO Add-On for WP All Import makes it easy to bulk import your SEO setting to the Yoast WordPress SEO plugin in less than 10 minutes.

The left side shows all of the fields that you can import to and the right side displays the data from your XML/CSV file. Then you can simply drag & drop the data from your XML or CSV into the Yoast WordPress SEO fields to import them.

The importer is so intuitive it is almost like manually configuring Yoast WordPress SEO when adding/editing a post.

WHY YOU SHOULD USE THE YOAST WORDPRESS SEO ADD-ON FOR WP ALL IMPORT

Import new posts, pages, or custom post types and configure their SEO settings all in the same import.

Update SEO settings for existing posts, pages, or custom post types already published on your site.

Compatible with all other WP All Import add-ons.

Complete support – configure all available SEO settings for your posts, including social media images.

WP ALL IMPORT PROFESSIONAL EDITION

The Yoast WordPress SEO Add-On for WP All Import is fully compatible with the free version of WP All Import.

However, the professional edition of WP All Import includes premium support and adds the following features:

Import files from a URL: Download and import files from external websites, even if they are password protected with HTTP authentication.

Cron Job/Recurring Imports: WP All Import Pro can check periodically check a file for updates, and add, edit, delete, and update your posts.

Custom PHP Functions: Pass your data through custom functions by using `[my_function({data[1]})]` in your import template. WP All Import will pass the value of `{data[1]}` through `my_function` and use whatever it returns.

Access to premium technical support.
