Description

JupiterMeet V2.6 Video Conference Free Download

JupiterMeet is a peer-to-peer room-based real-time audio and video meeting solution in pure WebRTC with amazing features. It has it's own signaling server built with NodeJS and Socket.io. So no third party services or Apis are needed, so you can use the system to host unlimited meetings forever!

The application is written in the most powerful PHP framework Laravel.

Changelog:

2.6.0 - May 9th, 2022

Added: Video preview before joining the meeting

Added: Username initials in the meeting when the video is off

Added: New content editor

Added: Sound when join/record request is made by a participant

Added: Filename in the chatbox

Added: Pagination in admin panel tables

Improved: Pricing, auth, privacy, terms, auth, email, and global configuration page design

Improved: Recording quality

Improved: Fullscreen to the big screen

Improved: Code improvements

Fixed: The local video was getting blank when clicking on the settings button in Safari iOS

Fixed: XSS prevention on dashboard and meeting pages

Fixed: Minor bugs
