NordVPN V0.0.7.0 for windows installer, 32 bit or win 64bit..

What is a VPN and how does it work?

VPN (a virtual private network) is a service that encrypts your internet traffic on unsecured networks to protect your online identity, hide your IP address, and shield your online data from third parties. VPNs use real-time encryption and send user internet data through a secure VPN tunnel to minimize the possibility of anyone tracking what they do online.

How does a VPN work? When you connect to a VPN service, it authenticates your client (i.e., devices, such as a smartphone) with a VPN server and applies an encryption protocol to all your internet data. The VPN service creates an encrypted “tunnel,” securing the data traveling from your device. This encryption keeps your data safe, even on public Wi-Fi.

What can a VPN offer me?

VPN offers enhanced online privacy, security, and protection. Using a VPN hides your IP address from cybercriminals, ISPs (internet service providers), snoopers, and hackers.

NordVPN protects your internet traffic with AES (advanced encryption standard) encryption, keeping your data and identity safe – even on public Wi-Fi. With a new IP and virtual location, you can avoid tracking and keep your data private from prying eyes.

Use NordVPN and enjoy all the benefits

Need more than just a VPN? Threat Protection makes sure you don't accidentally download malware or enter a malicious website. This NordVPN feature also blocks trackers and invasive ads to make your browsing safer and protects you from cyberthreats.

Dark Web Monitor scans public data breaches when they happen. If your login credentials are leaked, it notifies you so you can act fast and secure your accounts.

Enable the Kill Switch feature to prevent your data from being exposed if your VPN connection drops. Kill Switch will automatically shut off your internet connection if something goes wrong with your VPN.

A wide network of servers

When it comes to speed, NordVPN is the leading VPNs in the world. It offers more than 5500 VPN servers in 60 countries. More servers mean you're sure to find one close by and always get a stable and safe VPN connection.

Need a specialized VPN server to help with heavy internet restrictions? Use our Obfuscated or Double VPN servers to get an extra layer of privacy online.
