Description

PHP CRUD Generator V2.3.1 Free Download

PHP CRUD Generator V2.3.1 Nulled - Advanced Database Admin Panel Builder

Create a Professional Bootstrap Admin Dashboard
with all CRUD PHP Operations from your Database
Smart Database Analysis

Easy Visual Application

Advanced Functionalities

NEW VERSION 2 – Suitable for MySQL, MariaDB,
Oracle, PostgreSQL and Firebird databases

What is PHP CRUD Generator?

Created with the most trusted web technologies, PHP CRUD Generator is a powerful and intuitive solution to create Bootstrap admin dashboards.

The one-page visual interface gives full access to the database.

PHPCG performs an in-depth analysis of your data and stores it: all types of relationships between tables, primary and foreign keys, field types and values, validation, etc.

This intelligent analysis is used to preconfigure the options adapted to each element of the administration panel.

Validate each of the 3 generator forms to create your Admin Panel content.

Bootstrap Admin Panel Builder

PHP CRUD Generator - Choose an action

Choose the table to be used for integration in your Admin Panel

Generate the relevant data table (READ)
Generate create/edit forms (CREATE/UPDATE)
Generate delete form (DELETE)

Customizable Bootstrap themes & CSS
20+ Bootstrap themes included
Change the Bootstrap theme & customize in a few clicks

Generate a full-featured Bootstrap Admin Panel
PHPCG automatically provides the best tools needed to build your Admin Panel: drop-down lists with integrated search, date and time pickers, collapsible menus, collapsible nested tables, in-place editing, file upload, image upload with editing features and thumbnail generation, help texts and tooltips.
