Description

PHP Form Builder V5.0.6 Free Download

What is PHP Form Builder?

PHP Form Builder is a complete library based on a PHP class, which allows you to program any type of form and layout them using simple functions and/or using its drag & drop form generator.

Forms can both be generated with Drag & drop and/or programmed in PHP.

PHP Form Builder includes the best Javascript plugins available and allows you to implement them in a very simple and elegant way.

Validation (live and server side), sending emails and records in a database are also extremely simplified.

The documentation is suitable for both novice PHP users and experienced programmers.

Numerous examples of code are available: Templates, "How to", Function reference, ...

Quick & efficient help guaranteed.

Please note that, unlike most other Form Builders, PHP Form Builder does not have a built-in backend.

This allows users to manage form data as they see fit.

The provided PHP PDO class provides all the necessary functions for inserting/editing records in a MySQL database.

Main features:

- Build any form with any framework
- Validate posted values
- Send your emails using customizable html/css templates
- Connect your database and Insert, Update or Delete records
- 300+ prebuilt templates included
- Bootstrap 4 Forms
- Bootstrap 5 Forms
- Bulma Forms

- Foundation Forms
- Material Forms
- Tailwind Forms
- uiKit Forms
- Visual Studio Code plugin
- Sublime-text plugin

Generate any type of form:

- Contact Forms
- Registration Forms
- Login Forms
- Order Forms
- Ajax Forms
- Modal Forms
- Step Forms
- Dynamic fields Forms
- Accordion Forms
- ... & much more ...

Highly customizable layout:

- Horizontal Forms
- Vertical Forms
- Inline Forms
- Icons
- Helpers
- Tooltips
- Input groups
- Button groups
- Fieldsets
- Columns
- Any custom Html

PHP Form Builder generates clean HTML5 markup (validated with W3C), with two separates functions to generate CSS and JS code, so you can render them separately. Plugin CSS & JS files are combined and compressed for minimum weight and fast loading

Suitable for use with any CMS:

- Wordpress
- Joomla
- Drupal

IDE extensions and plugins for auto-completion:

- Visual Studio Code
- Sublime-text 3 plugin
- Bracket plugin

Build Bootstrap 4, Bootstrap 5, Bulma, Foundation, Material Design, Tailwind & uiKit forms

Bootstrap 4 / Bootstrap 5 css

- Choose your preferred theme among the preview themes (most from Bootswatch)
- ... or use your own Bootstrap to match your site design
- Can be used with any other framework
- Can be used without any framework
