Description

Premium URL Shortener V7.3.2 Free Download

Premium URL Shortener V7.3.2 is a PHP URL shortener script packed with many unique features. It allows you to shorten a long link into short smart link that you can use to monitor clicks and optimize your marketing campaigns. It provides you many unique tools to quickly bootstrap a link shortening website. Some of the features include geotargeting, device targeting, premium membership, powerful dashboard and admin panel and a series of CMS tools to help you build your dream. It is being actively developed for over 9 years so this means it will keep getting better and better with each update (incredible value!).

Some Awesome Features:

Bio Profile/Link in Bio Generator

Generate beautiful bio profiles, share a single link and monitor traffic. Add widgets and links to social media account and customize bio profiles with stunning colors.

Advanced QR Generator

Generate unique QR codes and share them with the public. Use different types of QR codes, customize colors, add your logo, choose from different shapes and track scans.

Software as a Service (SaaS)

With the extended license, the script turns into a SaaS platform and automatically manages all payments through Stripe, PayPal and Bank Transfer.

Team Feature

The new team feature allows you to invite members to your group and operate the same account as a team. This is perfect for collaboration!

Custom Domain

The script supports custom domains for both users and the admin. If your users want to use their own domain, they can just add it and start

using it. The admin can also add extra domains for customers to use. This is perfect if you don't want customers to use your main domain name.

Campaigns & Link Rotator

The campaign feature allows you to regroup some links and will generate you a special link where you will be able to send that to people. That special link will allow them to see all links in the campaign and use them. Campaigns also aggregates statistics for all links in that campaign.

Splash & Overlay Pages

Script now automatically creates dedicated page for media URLs such as Youtube, Vine, Dailymotion, etc (View Demo). Users can now create a custom splash page and this can be a paid feature. Various CTA popups are also available as overlays.

Geotargeting & Device Targeting System

Users can choose to redirect visitors to a different page using their location based on both the country and the state or their device. This option can be disabled from the admin panel or per plan.

Custom Parameters & UTMs

User can add custom parameters like affiliate tags or use the system to add UTMs.

Pixel Tracking

User can add from over 15 provides including but not limited to Facebook, Twitter, Bing, Google Ads, Google Tag Manager, Google Analytics, Snapchat, Reddit, Quora, Pinterest and much more.

Slack, WordPress & Zapier Integrations

Setup Slack and allow your users to shorten links directly from Slack using custom commands! Your users can setup Zapier and the script will notify Zapier when a new link has been shortened or when someone clicks a link! The script also includes a wordpress plugin for your customers so they can easily use the platform to shorten links.

Private Service

Are you looking to use this script for your own purpose? No problem. Just enable the private option in the admin panel and only you and all the accounts you only will create will be able to access the site and use the features.

Anonymous User History

Anonymous users can now keep track of their last 10 URLs without being registered. This option can easily be enabled or disabled from the admin panel.

Social Logins

User can now instantaneously login using their Facebook, Twitter or Google account.

Easy Translation

You can easily translate this script to any language you want by using the built-in language manager. Create a new translation, edit old ones or even deleted them with a click of a button. Everything is now automated meaning that languages will be added to the menu right away.

Full-Featured Blog

Create your own blog with ease right from the admin panel. No need for a third-party software.

Dedicated Help Center

Create your own help center with the click of a button and add questions & answers to help your customers. No need for a third-party service provider!

Advanced API System

Powerful API system requires users to authenticate using a unique API key associated to them upon registration. All URLs generated by a registered user get automatically saved on their account.

URL Validation & reCaptcha Plugin

Extensive validation and URL filtering-system gives you the peace of mind. Several options are built-in to automatically disable "inappropriate"

URLs or domain names (including tlds) from being processed by the system. The script also comes reCaptcha and SolveMedia Captcha. If enabled, the Captcha system will only be shown to anonymous users (users not registered).

Full-Featured Administration Panel

Powerful administration panel gives you total control on your website. It gives you the ability to manage URLs, users and custom pages. You can also control all of the features from the admin panel by enabling or disabling them with a click of a button. You can control Advertisement, Various Captcha Systems, Frame, API System, User Registration, URL Filtration, Themes and Maintenance and more.

Responsive Template with 3 Schemes including Dark Mode with built-in Template Editor

The default theme comes with 3 schemes (default, light and dark). You can easily edit the layout and the theme to fit your need with the new in-script editor. The script now supports child themes allowing you to easily customize the theme without worrying about updates overwriting them.

Quick & Easy Installer

Powerful, quick and easy installer sets up your website in a minute. You don't need to go through the hassle of dumping SQL files and editing PHP files. It provides a step by step installation of this software.

1-Click Updater

Update the script directly from the admin panel with the click of a button. Hassle-free!

Enterprise-level Documentation

Extensive and thorough documentation helps you understand all aspects of the product. [Views Docs](#)
