Description

Product Page Shipping Calculator Plugin Free Download

Check available shipping methods to your area

Customer can know if the product can be shipped to there location or not, so they don't have to go to checkout page to find out that you don't ship to there area

Plugin show the available shipping method even when customer has not added his address, plugin show the method based on the shipping zone assigned to customer by WooCommerce

He can change the delivery location and he can see the changed cost and shipping method available for that particular location

All the calculation is done on Ajax so no page reload is needed, and page caching will not affect it as well

Change the position of the calculator on product page to be above add to cart button or below add to cart button

It support WPML and Polylang

Disable auto loading of the Shipping method

Select different position for the result from the given 3 positions

Disable shipping calculator on specific product
