Description

Redux Framework V4.4.11 WP Plugin Free Download

Redux Framework V4.4.11 was built by developers for developers. We save you months if not years in your development time. Everything we do is to help innovation in the industry.

?? WHAT THE PLUGIN DOES?

Redux is a simple, genuinely extensible, and fully responsive options framework for WordPress themes and plugins. Built on the WordPress Settings API; Redux supports many field types, custom error handling, custom fields & validation types, and import/export functionality.

But what does Redux actually DO? We don't believe that theme and plugin developers should have to reinvent the wheel every time they start work on a project. Redux simplifies the development cycle by providing a streamlined, extensible framework for developers to build on. Through a simple, well-documented config file, third-party developers can build out an options panel limited only by their imagination in a fraction of the time it would take to build from the ground up!

? WHAT FIELDS DOES REDUX OFFER?

Accordion
ACE Editor
Background
Border
Box Shadow
Button Set
Checkbox / Multi-Check
Color (WordPress Native)
Color Gradient
Color Palette
Color RGBA
Custom Fonts
Customizer
Date
Date/Time
Dimensions (Height/Width)

Divide (Divider)
Editor (WordPress Native)
Gallery (WordPress Native)
Google Maps
Icon Select
Image Select (Patterns/Presets)
Import/Export
Info (Header/Notice)
JS Button

Taxonomy Metaboxes
Text
Textarea
Typography
User Profile Metaboxes

* The most advanced typography module complete with preview, Google fonts, and auto-css output!

User Profile Metaboxes

Widget Areas (Classic Widgets only)

?ADDITIONAL FEATURES

Full value escaping

Required – Link visibility from parent fields. Set this to affect the visibility of the field on the parent's value. Fully nested with multiple required parents possible.

Output CSS Automatically – Redux generates CSS and the appropriate Google Fonts stylesheets for you on select fields. You need to only specify the CSS selector to apply the CSS to (limited to certain fields).

Compiler integration! A custom hook runs when any fields with the argument `compile => true` are changed.

Field validation and sanitization

Field and section disabling

Oh, and did we mention a fully integrated Google Fonts setup that will make you so happy you'll want to cry?
