Description

Repairer - Repair/Workshop Management System Free Download

Repairer V4.0 – Repair/Workshop Management System is carefully developed for easy management of any type of repairshop/workshop. It's actually an innovative, simple and powerful management tool, designed and developed for you. It's just your trusty employee. It's a web based system where you can manage reparations, clients, inventory, purchases etc.

Quick Installation Guide

Copy Files Unzip the file you downloaded from CodeCanyon, copy the contents in the to your webserver.

Import Database When you unzipped the file in step 1, there is a folder called database you will find. In there you will find an SQL file(repairerr.sql), that is the system database. Import it to your PhpMyAdmin or whatever system you use.

Edit .env file On the folder you pasted on your installation folder, you will find a file called .env . This is a very important file that stores system variables. Open the file in a text editor and edit the following lines. The other lines can be edited via the system settings page so don't worry about them.

```
APP_URL= your domain name
DB_HOST=localhost
DB_USERNAME=username
DB_PASSWORD=password
DB_DATABASE=database_name
```
