Description

SEO Studio V1.86.10 Professional Tools for SEO Free Download

SEO Studio is a curated collection of 22 search engine optimization and marketing tools that deliver high quality information with no operational costs.

Features
Free to operate
The script works immediately after installation with no further configuration required. All of the tools are completely free to operate and don’t rely on any premium or paid third party services.

Easy to install
The installation process is extremely simple – just upload a single install.php file to the desired location on your server and open it in your browser. Your new website will be up and running in minutes.

Multilingual
The script can be translated to any language, including right-to-left languages, and supports multiple languages at the same time. Plus, save time with the new auto translate feature, which can translate most of the text in seconds.

User management
Allow users to register their own accounts and save their domain names for quick reuse across all of the tools. You can also restrict tools to registered users, or you can disable registration completely if you’d like.

Customizable branding
It’s easier than ever to match the website to your brand. You can customize the logo, favicon, and color scheme easily from the admin panel. You can also choose from four different variants of tool icons from the included SEO & Internet Marketing icon set.

Customizable pages
You can easily add custom content to all built-in pages from the admin panel, allowing you to attract organic search traffic. You can also fully manage the tools page.

Customizable tools

You can add custom content to the tools, such as tailored instructions or other relevant information. You can also hide or rename tools, customize their meta tags, and even change their icons.

Automatic updates
Web marketing tools break over time. The script comes with optional automatic updates that ensure they'll continue working long into the future. You will never need to install an update manually again.

Advertising support
If you have an approved account with an advertising vendor, you can easily place advertising banners throughout the script from the admin panel. You can optionally hide ads for certain groups of users.

Note: The out-of-box experience for this script does not meet the criteria for AdSense approval. Please don't purchase unless you are already approved for AdSense or are familiar with the criteria.

Tool embedding
You can easily generate code snippets to embed specific tools onto other websites. This makes it possible to embed the tools on platforms like WordPress.

Admin analytics
The admin dashboard shows simple usage analytics for the last week, so you can keep track of how your website is growing.

Tool usage monitoring
The admin panel conveniently allows you to track which tools are being used. You can see who is using the tools, what their website is, and any other inputs entered into the tool.

Email support
The script can send new user verification and password reset emails. You can configure the script to use PHP's default mail settings, MailGun, SendGrid, or SMTP. You can also customize the email templates.

Data sources
This script is a web scraper, which means it obtains its data from other websites, often by disguising itself as a regular user of those websites. Here are the current sources:

Google – web search
Bing – web search
SpyFu – traffic & keyword research
Surfer SEO – keyword research
WebMeUp – backlinks
Pingdom – speed tests
You do not need to register or pay for any of the above services. The tools work immediately after installation. If these data sources ever go offline, I will always endeavor to find a replacement.

Server requirements
PHP 5.6.1+

PHP mysqli and curl extensions
MySQL 5.5+
