The Martian is a 2015 science fiction film directed by Ridley Scott and starring Matt Damon. Drew Goddard adapted the screenplay from the 2011 novel of the same name by Andy Weir. It also stars Jessica Chastain, Jeff Daniels, Kristen Wiig, Chiwetel Ejiofor, Sean Bean, Michael Peña, Kate Mara, Sebastian Stan, Aksel Hennie, Mackenzie Davis, Donald Glover, and Benedict Wong.

The film depicts an astronaut's struggle to survive on Mars after being left behind and NASA's efforts to return him to Earth.

The Martian was produced through 20th Century Fox in the United Kingdom and the United States. Producer Simon Kinberg began developing the film after Fox optioned the novel in March 2013. Goddard, who adapted the novel into a screenplay, was initially attached to direct, but production was only approved after Scott replaced Goddard as director and Damon was cast as the main character. Filming began in November 2014 and lasted about 70 days. Twenty sets were built on one of the largest sound stages in the world in Budapest, Hungary. Wadi Rum in Jordan was also used for exterior filming.

The film premiered at the 2015 Toronto International Film Festival on September 11, 2015. It was released in the UK on September 30, 2015, and in the US on October 2, 2015, in 2D, 3D, IMAX 3D and 4DX. It received positive reviews with praise for its direction, visual effects, musical score, screenplay, scientific accuracy, and likability, largely due to Damon's performance and grossed over \$630 million worldwide, becoming Scott's highest-grossing film to date and the tenth-highest-grossing film of 2015. It was nominated for seven awards at the 88th Academy Awards, and received numerous other accolades.

SYNOPSIS: Martian solar day (sol) 18 of their 31-sol expedition. A severe dust storm threatens to topple their Mars Ascent Vehicle (MAV). In the ensuing evacuation, astronaut Mark Watney is struck by debris and presumed dead. With the MAV on the verge of toppling, the remaining crew takes off for their orbiting vessel, the Hermes, leaving Watney behind. Watney awakens after the storm, injured and with a low-oxygen

warning. He returns to the crew's surface habitat ("Hab") and treats his wound. As Watney recovers, he begins a video diary. Unable to communicate with Earth, his only chance of rescue is the next Mars mission; in four years, Ares IV will land 3,200 kilometers (2,000 mi) away at the Schiaparelli crater, the Ares IV MAV has already arrived on the site in preparation for the mission.

Watney's immediate concern is food; being a botanist, he creates a garden inside the Hab using Martian soil fertilized with the crew's bio-waste and manufactures water from leftover rocket fuel. He then cultivates potatoes using whole potatoes reserved for a special Thanksgiving meal. He also begins modifying a crewed rover for the journey to the Ares IV MAV. On Earth, NASA satellite planner Mindy Park, reviewing satellite images, notices moved equipment and realizes Watney must be alive. NASA director Teddy Sanders releases the news to the public but decides not to inform the Ares III crew en route to Earth, over flight director Mitch Henderson's strong objection. Watney takes the rover on a one-month journey to retrieve the Pathfinder probe, which fell silent in 1997. Using Pathfinder's camera, he establishes visual contact with NASA. The agency transmits a software patch to link the mission's rover with Pathfinder, enabling communication by text. Sanders finally allows Henderson to inform Watney's crewmates.

The Hab's airlock blows out, injuring Watney and destroying the potato crops; although he repairs the airlock, he is again threatened by starvation. Mars missions director Vincent Kapoor and Jet Propulsion Laboratory (JPL) director Bruce Ng prepare a resupply to deliver enough food for Watney to survive until Ares IV's arrival. Sanders orders routine safety inspections bypassed to expedite the mission, but an oversight causes catastrophe as the resupply spacecraft disintegrates shortly after launch. The China National Space Administration decides to offer a launch vehicle — originally intended for the Taiyang Shen space probe — to resupply Watney, in exchange for getting a Chinese astronaut on the next Ares mission. Astrophysicist Rich Purnell devises an alternative plan: have the Taiyang Shen launcher rendezvous with and resupply the Hermes, which will then use Earth's gravity to "slingshot" back to Mars two years earlier than Ares IV. Sanders rejects the idea, considering it too risky for the Hermes crew. Henderson surreptitiously sends Purnell's proposal to the crew; they unanimously vote in favor and divert the Hermes. Sanders is forced to support them publicly, but demands Henderson's resignation after Watney is rescued.

Watney travels the 90-sol journey to Schiaparelli, where the MAV for Ares IV is pre-positioned. He plans to use it to rendezvous with the Hermes, but needs to lighten it considerably by partially dismantling it. He takes off, but as the MAV runs out of fuel, its velocity relative to the Hermes is too fast for Watney to be picked up. Commander Lewis quickly improvises, using an explosive to breach a forward airlock, resulting in air violently escaping and slowing down the Hermes. Lewis uses a tethered Manned Maneuvering Unit to reach Watney, but they are still too far apart. Watney pierces his pressure suit, using the escaping air to propel himself to Lewis, ending his 561 sols alone on Mars.

After returning to Earth, Watney becomes a survival instructor for astronaut candidates. Five years later, as the Ares V is about to launch, those involved in Watney's rescue are seen in their current lives.
