### Description

uCloud V 2.1.0 File Hosting Script Securely Manage, Preview & Share Your Files Free Download

uCloud enables freelancers, small businesses (such as media agencies) and webmasters to easily share their files online. It's been built to be extremely robust, secure and very fast!

#### Features:

NEW PHP 8.1 support

NEW LiteSpeed support (aswell as Apache & Nginx)

NEW 2FA integration using Google Authenticator

NEW Video, audio, image & document embed code

NEW Code previews & syntax highlighting

NEW Core framework performance improvements

#### Upload Files:

SFTP, FTP, Rackspace and Amazon S3 Storage.

BackBlaze storage support.

Use with Wasabi using this guide.

Scale your storage by using your own dedicated server storage (direct downloads/uploads).

Internally shared files & folders. Share multiple files & folders with other registered users and enable them to view, upload and download files.

Global sharing option.

Multi-file uploader with progress. 10GB+ filesize supported.

Images previewed before upload. File icons shown for each file before upload.

Percentage progress, size remaining, upload speed and time remaining.

Background uploading of files. Continue to manage your account while files are being uploaded.

Drag & Drop into the browser to begin uploading.

Send via email option once uploaded.

Copy folder url to the clipboard link.

Built in url shortener.

Support for multiple file servers.  
File details page with the following:  
Full path to the file.  
HTML code to directly copy into a website.  
Forum code to directly copy into a forum.  
Link to view statistics for the file.  
Link to remove the file.  
Links to share with common social media sites; Facebook, Twitter etc.  
Link to share via email.  
File Manager:  
Login with your Facebook, Twitter or Google Account (optional setting via admin).  
User registration page.  
NEW Terms & Conditions page.  
NEW Privacy Policy page.  
Built using ajax so the entire file manager is lightning fast!  
Thumbnails generated for images & pdf files (requires imagemagick)  
File previews for a huge amount of files:  
Images – jpg, jpeg, png, gif, wbmp  
Documents – doc, docx, xls, xlsx, ppt, pptx, pdf, pages, ai, tiff, dxf, svg, eps, ps, ttf, otf, xps (< 15MB)  
Videos – mp4, flv (when Flash enabled), ogg  
Audio – mp3  
Caching of image thumbnails for fast load times.  
Right-click menu options on each file & folder to quickly manage the options.  
Powerful search widget. Quickly shows you files and folders which match your search.  
Advanced search to find files by upload date and folder.  
Requires account to upload and manage files. (admin controlled)  
2 view options for files:  
Icon view – showing file thumbnails.  
List view.  
Full screen mode.  
Sort file listing by filename, file size, date uploaded, last access and total downloads.  
Change the amount of files shown per page.  
Download an entire folder as a zip file.  
Duplicate file(s) option.  
Rename, move & delete file options.  
Watermarking of images by folder option. Upload a png watermark, set the position and padding. This can then be enabled by folder. Use this to share 'proof' copies of images to customers without giving the user full access to the image.  
File Downloads:  
Built in support for xSendFile & xAccelRedirect! Big improvements on server performance if enabled.  
Files are stored securely on your web host. They are renamed without the extension on upload and placed inside a folder which can't be accessed directly.  
Downloads are done using a secure access hash which expire after use. The same download link can not be used multiple times.  
Detailed File Statistics:  
Daily, weekly, monthly downloads.  
Referring sites.  
Visiting countries.  
Visiting browsers.  
Visiting operating systems.  
Sharing:  
Links to share files & folders via Facebook, Twitter, LinkedIn & more.  
If a folder is set as private, generate a unique url to enable someone without an account to access it.  
Send via email option on all files & folders.  
Option to hide or show the download button when sharing folders.  
Option to allow or disable downloading of all files within a shared folder.  
Security:  
2FA support using Google Authenticator.  
Account password stored using SHA256 & PBKDF2 key extender.  
Set file folders and private or public.  
Set passwords on file folders.  
IP blacklisting – block IP addresses from using the site.  
Support for https.  
Externally tested for XSS and SQL injection attacks.  
Customisations:  
Written for PHP7.3+.  
100% full source code.  
Easy installation.  
Fully customisable.  
Modern template. (easily customise and create additional ones)  
Simple, clean, ajax style look and feel.

Admin Area:

Redesigned admin area using Bootstrap 3.

Interactive bulk import tool.

Separate dedicated admin area.

Dashboard detailing downloads and active files.

Search files.

Disable files.

NEW Support for multiple languages. Automatic language translation via Google Translation API. Note: This may incur additional charges for using their API.

Manage users and filter by user files.

Manage blocked IPs.

Manage site settings.

Set and manage file servers.

Configure to use specific file server or the one with most space.

Set template.

Set user account settings:

Days to keep inactive files.

Maximum upload filesize.

and more.

Option to set the filename on the download url.

Modern Ajax interface.

Via the admin area easily set the logo, extra css and site skin.

Automatic language translations via Google Translate API. Translate the entire site content to another language by clicking a button. Note:

Requires a Google API key. Manually edited translations can be marked as 'locked' so they're not overwritten.

Added option in admin to block the same file from being re-uploaded. Optional on file remove and automatic after removal on abuse reports.

Added admin "impersonate user" option, so admin users can login as any other user account.

Added new admin page for backing up the database and codebase. Functionality also built in preparation for automatic upgrades at a later date.

Requirements

PHP 7.3+ including PHP 8.0+

Linux OS (standard on most shared hosts)

MySQL 5+ with 1 empty database

PHP PDO MySQL Extension

PHP GD & FTP Extension (normally enabled as standard)

Apache with Rewrite Module or Nginx

A Web Browser that supports HTML5/Javascript (IE9+, FireFox, Safari, Chrome)
