### Description

Web Cart V2.1 Multi Store eCommerce Shopping Cart Solution Free Download

Webcart is a powerful Multi-Store Shopping Cart Software. It is a platform building an online store. It accepts the customer's payment and organizes the distribution of that information to the merchant, payment processor, and alternative parties.

Webcart can help you to start and manage your online stores with ease. It supports multiple storefronts which mean customers can easily switch between them and buy products from their preferred stores. Hence, all the storefronts are managed from a single Admin Panel. In addition, you can assign staff to a store with a particular role having access control. Also, roles can be created based on permissions and there are over 60 permissions available.
