WebViewGold for Android V15.5 Free Download

WebViewGold for Android v15.5 - Convert website to Android app - nulled

Let's convert your websites and web apps into apps for Android! This WebView app template supports all kinds of web apps/websites (including HTML, PHP, WordPress, Progressive Web Apps, HTML 5 Games, WiX, Jimdo, apprat.io, bubble, Webflow, ...). WebViewGold comes with a 100% Google Play Store approval guarantee: Receive a full refund of your license if Google rejects your app built with WebViewGold (by claiming within 14 days after purchase). Use your mobile website or web app as the basis and this Android Studio package wraps your content into a real, native Android app using an advanced WebView approach! An excellent approach to gain access to millions of Google Play Store customers. No coding, no more plugins needed. It just works.

Features:

- * Full Android App Template – no coding required! #nocode
- * 24/7 Human Live Chat Support & AI-Searchable Documentation
- * Works with any web app/website that works on Chrome browser
- * Submit your app to the Google Play Store easily (or use our App Publishing Service)
- * Easy: Just define your URL (or your local HTML folder) and WebViewGold takes care of the rest!
- * Always up-to-date
- * Optional fallback switch mode: Use local HTML folder if the user is offline, and use the remote URL if the user is online
- * Native Loading Spinner/Android Activity Indicator while loading your URL
- * Optimized for exceptional performance & using powerful Chromium web engine
- * Display a Splash Screen (e.g., containing animated GIFs) for some seconds or even until the first page is loaded completely
- * Smart Performance Cache Mechanism
- * Offline Screen with "Try again" button if your app can't connect to your URL
- * HTML 5 Audio / HTML 5 Video Fullscreen / HTML Geolocation support
- * URL Handling: Define which URLs should be opened in System Browser instead of your app (ideal for external links, e.g., Facebook/Twitter)
- * Custom Status Bar Background Color
- * Multi-Language Support: Provide app text strings in multiple languages and/or append the user system language to your WebView URL
- * HTML5 Live Audio Recording Support
- * Dynamic UI API
- * HTTP Basic Authentication Handling Support
- * File Upload & Camera Upload Support

- * Support for uploading multiple files in HTML upload forms
- * Custom User-Agent supported
- * App Lock functionality, enabling your app to enforce bio authentication/passcode for app access
- * Google AdSense Support
- * Haptic Feedback API (Vibration)
- * data: / base64 File Download Support
- * Option to prevent the device from going to sleep mode while the app is active
- * Image, PDF, ePub, Documents, and Music File Downloader API (add unlimited file types that should trigger the built-in file downloader)
- * In-App Purchases & In-App Subscriptions API (Extended License required)
- * Native Sharing Dialog API
- * UUID API
- * Hardware Acceleration Options
- * Root Detection Options
- * Pull To Refresh Functionality
- * Take Screenshot API
- * App Version Check API
- * Dynamic Status Bar Color API (change status bar color using JavaScript)
- * Social Login Support (“Login with Google” and “Login with Facebook”)
- * Swiping Navigation Functionality
- * Optional Tab Functionality with additional In-App-Browser (by calling top.location or top.location.href links)
- * “Reset the app” APIs (clear cookies and cache of your user via link trigger, at app launch, and/or app exit)
- * “First Run” Dialog (e.g., “Thanks for downloading this app!”)
- * “Rate my app” Dialog
- * “Follow on Facebook” Dialog
- * Zoom Handling Options
- * Easy orientation settings (e.g., portrait, horizontal, automatic)
- * Powerful QR Code Scanner API
- * NFC (Near Field Communication) integration possible (sold separately)
- * Push Notifications via JavaScript, Pushwoosh, Firebase, OneSignal, or bubble.io (with URL Deeplinking and Unique User Identification)
- * Option to append individual push user IDs to the web page URL to assign unique push tokens to the user on the server side (e.g., ?user_push_id=XXX)
- * Push In-App Messages Support
- * Support for WalletConnect scheme (wc:)
- * Banner ads, Interstitial ads, & Rewarded ads by AdMob or Facebook Audience Network can be activated
- * Advertising ID Support
- * Screenshot Prevention Option
- * Auto-Refresh Option
- * Disable the AdMob ads when the user bought your In-App Purchase product
- * Retrieve a UUID/Universally Unique Identifier via JavaScript easily
- * Define custom CSS classes (that will be injected into your web app code while loading in the app built with WebViewGold)
- Custom JavaScript Code Injection
- * SSL Certificate Handling Options
- * Your app built with WebViewGold will save all cookies (including login session cookies) until they expire (this is defined by your server/your site)
- * App Links (possibility to easily configure a link scheme like https://www.webviewgold.com/link=XYZ which can be triggered from Mail app, browser apps, ... and opens the attached link XYZ in the WebView app)
- * All kinds of web apps/websites supported (including HTML, PHP, WordPress, Progressive Web Apps, HTML 5 Games, ...)
