### Description

When charging a pre-order upon release, the customer's payment method is charged when the product is released (either by reaching the availability date, if set, or manually within the Pre-Orders admin) when using a supported gateway. If a supported gateway is not available, the customer will receive an email when the pre-order is released prompting them to come back to the store and pay for their pre-order.

All pre-orders can be managed through a dedicated page. From here the admin can delay, complete, cancel, or email selected pre-orders, or use the actions section to perform the same actions for all pre-orders for given product.

Pre-Orders can be charged in two ways, up front or upon release. When charging a pre-order up front, the customer pays the entire pre-order amount during the initial checkout.
