Description

Woo Product Table for WooCommerce V3.4.8 WP Plugin Free Download

Woo Product Table for WooCommerce by CodeAstrology V3.4.8

(Woo Product Table) Product Table plugin helps you to display your WooCommerce products in a searchable table layout with filters. Add a table on any page or post via a shortcode. You can create tables as many as you want.

Create a table for restaurant order systems, Online music sell, product Wholesale, Course Booking, or Selling books any many more.

Have a looks in short for WooCommerce Product Table

Shortcode Example

```
[Product_Table ID='123' name='Table Name']
```

ID – will be post's ID(required).It will generate automatically when you create your table.

name – only for identifying your table's shortcode.(Optional)

Demo table list

Advanced Search Table

Our most valuable feature is search & filter. Customers can filter products by any taxonomy or attribute like products categories, tags, color, or size. Also can filter by any custom field data. Have an option to search from specific areas.

A table on Single Variable Product Page

If you select a table and enable 'Variation Table' then it will replace the default variation dropdown select options and will display that table on every variable product page.

A table on an archive page.

You can override the default archive page and display our table. (Please note Product table will display products according to the WooCommerce default query and the Advance Search box is not available on the Archive page.)

Product Variant In Separate Row

If you have variable products and you want to show every variation as a single product, this table is like that.

Filter By Custom Field

Here you can filter products by custom field. This will give you the freedom to filter products by any keyword.

Quick Order Table

This is a special table. If you want to add a product to the cart just increase the quantity. The product will automatically add to the cart.

User Conditional Table

Hide any column for Guest users. Users only can see some columns if they are logged in.

Attributes in Different Column

You can show product Attributes in a different column as well as in the Search Box.

Redirect to checkout/cart page

On this table, if a customer adds a product to the cart then will automatically redirect to the cart/check out page.

Restaurant Table

This table is made for a restaurant. Users will easily order products from the table.

Mobile Wholesale

Create a table to sell mobile. Show products specifications using our description column.

Audio Player Table

This is an audio table. User play audio from the table.

Online Music Sale

Create a table to sell your music. Users also can listen to demo audio.

Books Table

Sell your books with the help of a table and increase user engagement.

Course Booking Table

Create a table for selling online courses. Users can book any course to learn about their interests.

Quotation Table

Users can send quotations using our plugin. Here is the demo table for that.
