WooCommerce SEO 14.4

Improve product descriptions with WooCommerce SEO 14.4

What did we change in WooCommerce SEO 14.4? Quite a lot, actually. To work properly on product pages, we had to set some new boundaries for a couple of existing checks. In addition, we added a couple that only make sense on product pages. Here's a list of the changes and additions:

Adds the Image alt tags assessment, which checks if all images have alt tags.

Removes the Outbound links assessment and Internal links assessment, as they are less relevant on product pages.

Sets the recommended minimum of the Keyphrase length assessment to 4 words.

Sets the recommended minimum of the Text length assessment to 200 words.

The SEO title width assessment no longer penalizes short titles.

Adds a criterion for orange bullet in the Images assessments on product pages.

Sets the recommended number of images to 4 in the Images assessments on product pages.

Adds the following improvements to the readability analysis on product pages:

Adds the List presence assessment which recommends using lists on product pages.

Makes the Subheading distribution assessment appear only when the text contains more than 300 words.

Sets the recommended maximum length of the Paragraph length assessment to 70 words.

Sets the recommended maximum percentage of long sentences in the Sentence length assessment to 20%. Language-specific percentages can override this default value.
