Description

YITH Multi Currency Switcher for WooCommerce V1.15.0 WP Plugin Free Download

What the plugin does

Enable a multi-currency system in your shop and allow users to see and pay for products in their own local currency

How you can benefit from it:

Make your e-commerce store ready for international sales and add an unlimited number of currencies;

Show a currency switcher everywhere on your site to allow users to see prices and pay in their favorite currency

Geolocate users and automatically show prices in the currency of their origin country;

Create custom rules to set which currencies need to be shown to users from specific countries;

Hide specific payment methods to users who are paying in a specific currency;

Set exchange rates manually or use the API to update them automatically from different sources (like the European Central Bank)

Set optional exchange fees to cover the fees applied by the bank or by the money transfer operator;

Reach new markets and sell products worldwide by simply adding unlimited currencies to your e-commerce store

If you have an e-commerce store, it's now time to expand your audience to a global level: the positive side of selling online is that you can easily reach customers from all corners of the world: you can internationalize your business with just a few clicks.

Though, users prefer visiting stores where prices are displayed in their own local currency and they are very unlikely to finalize an order in a currency they are not familiar with. For this reason, if you don't want your business to have geographical limits and want to sell your products "beyond borders and boundaries", it is key that your shop is user-friendly and focussed on the needs of the market shares that you intend to reach.

With our YITH Multi-Currency Switcher, you will be able to add multiple currencies to your shop and offer a totally positive user experience. Speak in terms of roubles to your Russian customers and in terms of dollars to US visitors; show your product prices in pounds to buyers in the UK and in Yuan to buyers in China. Just one plugin to expand your business internationally and make your shop more usable for all your users, regardless of where they are.
