Description

YITH WooCommerce Order & Shipment Tracking V2.23.0 WP Plugin Free Download

YITH WooCommerce Order & Shipment Tracking V2.23.0 Nulled What the plugin does Allows your customers to easily track the shipping of orders placed in e-commerce.

How you can benefit from it:

add, edit or import the order tracking number, the carrier name, and the tracking URL of every order placed in your shop;

improve user experience in your shop by offering an easy way to track orders and shipments to customers that placed orders;

include the tracking info in the order emails sent to the customers and on their My Account page;

reduce the workload of your customer service by offering an automatic tracking of orders to decrease the number of phone calls or emails related to the status of the orders.

Allow orders and shipping tracking to build trust with your customers

Offering a positive buying experience should be the main goal of any e-commerce. Yet, the buying experience doesn't end when the customer adds the product to the cart and pays for it; on the contrary, it's just after paying that the user will start feeling vulnerable and wondering if your shop is reliable, trustworthy and if the product will be shipped for real, with which carrier, when will it be delivered, and what are the steps to follow in the case of a late delivery or no delivery at all.

Usability research revealed that 97% of customers expect to be able to monitor every step of the shipping process for the products they have purchased online.

YITH WooCommerce Order & Shipment Tracking Free Download allows inserting shipping information (carrier's name, delivery date, tracking code, carrier's site URL to track the order in real-time, etc.) into every order and showing the same data on your customers' accounts (both in the orders list and order details) and in the orders' emails.

Giving customers a tool to observe the whole delivery of the product with a single click will simplify the entire sale process, will help you build trust with them, and will reduce the workload of your customer support.

Choose the carriers in charge of your shipping from a list of over 480 supported services

The plugin supports 489 carriers; you only need to select the ones provided and the tracking links will be automatically generated. You can't find your carrier on the list? Don't worry! Give us a heads-up and we will add it in a plugin update as soon as possible.
